Assembling instruction COMFIT – addition

The COMFIT fittings are designed for connecting PE pipes (HDPE pipes and other types of PE pipes) for telecommunication purposes.

They are suitable for installation in open trenches (free laying), where sand is used to fill and subfill the pipeline.

Sand fill and underfill protect the pipeline and fittings, therefore the risk of damage is minimized.

Install the pipe in accordance with the pipe manufacturer's instructions.

Install COMFIT on laid piping in accordance with COMFIT installation instructions.

All work safety regulations must also be observed during installation.
